far beyond ordinary

BEYOND WHAT I SEE

Years from now, this racquet will be lighter and stronger than you could ever picture. Fully packed with new innovations. All those innovations are bound to be discovered. They're all hidden, impatiently waiting to be uncovered.

When I get my hands on this racquet, it will be the culmination of thousands of ideas, tried and failed. It will be standing proof, that endlessly testing both expected and unexpected ideas will mold the basis for game-changing performance.

But this racquet won't uncover itself — not without a little imagination.

It's time I search beyond what I know today.

ISOMETRIC™

SIGNATURE YONEX TECHNOLOGY SINCE 1980

7% LARGER SWEET SPOT

Developed over 30 years ago, the ISOMETRIC™ design increases the sweet spot by 7%*. Compared to a conventional round frame, a square-shaped ISOMETRIC™ racquet generates a larger sweet spot by optimizing the intersection of the main and cross strings. ISOMETRIC™ technology delivers greater control without sacrificing power.

ISOMETRIC™ is a trademark of Yonex Co., Ltd.

OVAL PRESSED SHAFT

O.P.S.
Oval Pressed Shaft

First introduced in 1969 with the T-7000 - our first aluminum tennis racquet - the Oval Pressed Shaft (OPS) is still incorporated into our most popular racquet series today. The Oval Pressed Shaft is designed to give players more spin, control, and feel. The shaft flexes at impact, increasing dwell time and minimizing vibrations.

REVOLUTIONARY GRAPHITE

Staying true to our roots, our graphite is sourced and engineered in Japan, giving our research and development team the opportunity to utilize a wide range of materials that suits players of all levels.

2G-Namd™ Flex Force

Aggressive, attacking spin for pinpoint control is achieved through a carbon nanotube structure that binds the graphite fibers together, which reduces energy loss. Due to its resilient properties, the material flexes and provides quick snapback.

Namd is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

2G-Namd™ Speed

Designed to produce flex and power, 2G-Namd Speed is developed from high modulus graphite fibers bound with CNTs, resulting in a material that transfers energy into quick snapback.

Namd is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

VIBRATION DAMPENING MESH

VDM
Vibration Dampening Mesh

First used in our snowboards to reduce vibrations at impact, Vibration Dampening Mesh (VDM) is now used in four of our racquet series. VDM is a stretchy mesh material that is wrapped around the graphite within the grip to filter unwanted vibrations and improve touch and precision.

SPIN

THE ART OF SPIN

The seventh generation VCORE is a masterpiece of technology and craft. The evolution of this iconic racquet combines undeniably precise spin and remarkable control, creating a true work of art.

New technology and structure combine with innovation to increase string snapback and movement, giving players access to the most spin in Yonex tennis history.

VCORE

VCORE

SILICONE OIL INFUSED GROMMETS

New silicone oil infused within the grommets allow the racquet to quickly flex and snapback into its original position.

ENLARGED FRAME TOP

A wider frame at 2 o'clock & 10 o'clock position increases the ball contact area, which produces a higher launch angle.

WIDER FRAME TOP

AERODYNAMIC TECHNOLOGY

Aero Trench and Aero Fin Technology reduce air resistance for easy maneuverability and added spin.

NEW THROAT DESIGN

Area 1 is T shaped cross section
Area 2 is H shaped cross section
This "torsional resistance" helps stabilize the racquet, reducing power loss.

NEW THROAT DESIGN

AREA 2

2G-Namd™ FLEX FORCE

FOR AGGRESSIVE, ATTACKING SPIN

Incorporated in the upper throat to the lower frame, new Flex Force graphite allows for the racquet to quickly flex and snapback for maximum spin potential.
